

***ZT awarded the first African OPGW project in Malawi***

Recently, the whole first optic fiber composite overhead ground wire item of African Malawi National Power Company adopts ZTT OPGW. On March 18th, Mr. Alexander Walota Kaitane who is in charge of this item led a team to visit China. The factory test for second batch of OPGW finished successfully.

The total length of this project is 264km. The products are divided into three batches for delivery. Since it is a very important project, Li Haiquan, General Manager of Zhongtian Hitachi, and other leaders paid great attention to the whole process. They required the related departments to organize capable work force to guarantee that the products have high quality and they can be

delivered on time. According to introduction, the first batch of OPGW has been delivered on January 20th. Now the products have been reached the destination. Their quality and packing got the customers' recognition. During this factory test, the team carried out strict locale test and communicated with production, technology and quality directors about details of production flow. They were very satisfied with the products' properties and production schedule. Before finishing factory test, Mr. Alexander Walota Kaitane said that ZTT OPGW has reached international advanced level in technology, quality, market operation record and production scale and ZTT products are very reliable.
